Synthetic two-dimensional (2D) polymers have totally different topology structures compared with traditional linear or branched polymers. The peculiar 2D structures bring superior properties. Although, from linear to 2D polymers, the study of these new materials is still in its infancy, they already

In such 2D representations of molecular structures the way the bonds are drawn (by solid straight lines) does not imply anything about orientation because such information is completely omitted from 2D representations of organic molecules.
