Outer space, or just space, is the expanse that exists beyond the Earth and between celestial bodies. Outer space is not completely empty—it is a hard vacuum containing a low density of particles, predominantly a plasma of hydrogen and helium as well as electromagnetic radiation, magnetic fields, neutrinos, dust, and cosmic rays.

### **Outer space - Wikipedia**

Space exploration is the discovery and exploration of celestial structures in outer space by means of evolving and growing space technology. While the study of space is carried out mainly by astronomers with telescopes, the physical exploration of space is conducted both by unmanned robotic space probes and human spaceflight.

Earth's Magnetic Field Magnetic field - Like a bar magnet, Earth's magnetic field is a dipole, (has both a N and S pole) - Solar wind contains electromagnetic particles that are deflected by earth's field.
