Lab #2 PHYSICAL SEPARATION TECHNIQUES Introduction When two or more substances, that do not react chemically, are blended together, the result is a mixture in which each component retains its individual identity and

Lab #2 PHYSICAL SEPARATION TECHNIQUES Introduction

A novel analytical method is introduced that measures the volume fraction of paraffins, olefins, naphthenes, and aromatics (PONA) in hydrocarbon liquids having distillation endpoints (American Society for Testing and

Materials, ASTM D 2887) of at least 300°C.

Paraffins, olefins, naphthenes and - ScienceDirect.com

Humans have 60–70 O₂-dependent oxygenases, of which some are important therapeutic targets. A priority in the development of oxygenase inhibitors is to identify scaffolds selective for a particular enzyme, made challenging by the highly conserved oxygenase active sites.

Organic matter preservation is central to understanding biological potential on Mars through time. Whether it holds a record of ancient life, is the food for extant life, or has existed in the absence of life, organic matter in martian materials holds chemical clues to planetary conditions and processes.
