LSS is classified by anatomy or etiology. Anatomic subclassifications include central canal and lateral recess stenosis. The classification of lumbar stenosis is important because of the implications of the underlying etiology and because it affects the therapeutic strategy, specifically the surgical approach.

Spinal Stenosis: Practice Essentials, Anatomy, Pathophysiology

Osteoarthritis is the most common type of joint disease, affecting more than 20 million individuals in the United States alone (see Epidemiology). It represents a heterogeneous group of conditions resulting in common histopathologic and radiologic changes.
